

Ron Meisels is one of North America's most successful technical analysts with over 35 years of stock market experience. He specializes in the independent research of Canadian securities. He is listed in the Canadian Who's Who.

He has been a private investor since 1963, and has been publishing the technically oriented "Phases & Cycles" since 1970. He was Director and Vice President of the brokerage firm Goulding, Rose & Turner from 1976 to 1982, and Vice President and Manager of Technical Research at Nesbitt Thomson Inc. (now Nesbitt Burns) from 1982 to 1990. Canadian Institutions ranked him among the top three technical analysts for six consecutive years (Brendan Wood Survey).

He has a truly distinguished track record in anticipating stock market moves, as illustrated by his famous "10,000 in 2000" prediction, made in January 1995 when the DJIA was at 3850. Ron contributes a weekly column to the Globe and Mail ("Technically Speaking"), is often interviewed on television (ROBtv), and is frequently quoted in major financial media such as Bloomberg and Reuters.
